## Foreword

The Government of Zimbabwe aims to meet national targets under the National Development Strategy 1, Sustainable Development Goals, including Zero Hunger by 2030, with the support of the United Nations World Food Programme and other development partners. Evidence and knowledge are the starting point to ending hunger and improving nutrition. Hence policies and programmes need to be based on accurate and reliable data and information to make a difference in people's lives. In view of the above, the District Profiles were developed to provide evidence-based information for programming by the Government, UN, and development partners. This process was led and hosted by the Food and Nutrition Council (FNC), supported by WFP, and with the participation of Government Ministries and NGOs through a multi stakeholder consultative process.

The country has continued to experience climatic and economic shocks. While recurring droughts, erratic rainfall, and poor harvests have been the drivers of food insecurity in rural areas, economic challenges remain as one of the major drivers of food inaccessibility in urban areas. From, these existing challenges were further compounded by the effects of COVID-19 and the lockdown measures which were put in place to curb its spread. To understand the evolving changes, it was necessary to update all the 60 rural District Profiles to more accurately identify and address the humanitarian and programmatic needs in Zimbabwe. The 2016 District Profiles had reached their full life span of five years.

The District Profiles were compiled using other existing information products such as the ZimVAC Livelihoods Assessment Reports, national Integrated Context Analysis (ICA), the Seasonal Livelihood Programming (SLP), and community action plans, among other key reference documents. The district profiles provide ward-level analysis as well as insights for programmatic needs at sub-district level. These are developed as a public good to support Government, UN and developmental partners in the design, targeting and implementation of humanitarian, resilience and development programmes.

These risk profiles provide a comprehensive sub district level overview focusing on infrastructure, water and sanitation, communication, livelihoods, poverty, climate, crops, livestock, markets, hazards and shocks, development indicators and priorities, food and nutrition security conditions, and recommendations.

It is my greatest hope that all stakeholders will find this updated information useful in further refining their programmes and targeting criteria for the development of Zimbabwe.

# Acknowledgements

The Food and Nutrition Council (FNC) would like to appreciate the support provided by the World Food Programme who worked tirelessly to ensure the successful completion of the district profiles.

Special thanks go to the various Government line ministries and departments, UN agencies, donors, and NGOs for sharing of information, technical support, facilitation, and collaboration.

Sincere appreciation goes to the Provincial Coordinators, District Food and Nutrition Security Committee and District Drought Relief Committee members for participating in the drafting of the profiles and the valuable information provided.

Our sincere gratitude goes to WFP Zimbabwe and the Government of Zimbabwe for funding for the activity.

### 1.1 Administrative Information

Makonde district is situated in the Northern part of Zimbabwe in Mashonaland West Province. It shares borders with Guruve district (Mashonaland Central) in the North, Zvimba on the North- East, Zvimba district in the east, Chegutu district in the south, Sanyati district in the South West, Gokwe North district (Midlands Province) in the South West and Hurungwe district in the West. Manyame river form its boundary to the East with Zvimba district, to the North the boundary is also Manyame river with Guruve district, to northwest is Angwa river which forms a natural boundary with Hurungwe district, its boundary to the West is Mupfure River which separates the district from Sanyati district and to the South it shares boundaries with Chitomborwizi small scale area. The district covers an area of approximately 8,680km<sup>2</sup>. The district has two local authorities namely, Makonde Rural District Council and Chinhoyi Municipality. Makonde Rural District Council comprises of nineteen (19) wards and fifteen (15) urban wards.

### 1.2 Traditional leadership

Makonde district recognizes the authority of traditional leadership whose powers are vested in the Traditional Leadership Act Chapter 29:17. Traditional leaders are the custodians of cultural practices, traditions, norms and values. Chief NemaMakonde is the only substantive chief in the district with four (4) headmen and 191 villages heads.

**Table 1: Traditional Leadership**

Chieftainship	Headmanship	Wards
NemaMakonde		Whole District
	Machiridza	16
	Musona	17, 18
	Matashu	14
	Chigaro	15

### 1.3 Councillors

The district has a total of thirty-four (34) rural and urban councillors.

### 1.4 Police Posts

There are six (6) ZRP stations spread across the district for people to access security services. There are also police bases which are Chale base, Alaska base, Kosana base and also neighborhood watch committees.

Table 2: Police Bases

Police Station	Rural Wards	Urban Wards
Chinhoyi central		10
Chemagamba		3
Zumbara	14	
Kenzamba	17	
Murereka	7	
Doma	2	

### 1.5 Magistrates And Prosecutors

There is a High court, mobile criminal and civil court. This is a notable improvement because in 2016 there was no high court in the district. The high court was commissioned in 2022.

### 1.6 Old People And Children Homes

The district has two (2) old people's home namely Chengetanai and Nazareth. It also has two children's home namely Good Shepherd and Erden Children' villages (ECV).

## 2. Population Information

Makonde district has a 2021 estimated population of 188 408 based on the Census 2012 population of 153, 540 people and an estimated annual population growth rate of 2.3%. Ward 8 has the highest population of 30 183 and the least is Ward 12 with a population of 2 208. Ward 12 has a high concentration of small scale farms. The 2012 Census report also indicates that about 50.5% of the population are men and 49.5% are women.

Table 2 shows the population distribution by ward.

Table 3: 2022 Makonde Rural Population Projections By Ward

Ward No	2012 HH	2012 Population	2016 Population	Projected 2021 Population

for updated population figures, refer to Zimstat Census report ( <a href="https://www.zimstat.co.zw">https://www.zimstat.co.zw</a> )				

## 2.1 Vegetation Characteristics

Makonde district falls in agro-ecological Region 2A, with some parts falling in natural Region III and IV. The dominant vegetation for the district in marginal areas include sparse bush dominated by acacia species and the higher rainfall areas are dominated by, *Julbernardia globiflora* (Mnondo), *Lannea discolor* (Mshamba), *Compretun* (Mupambare) and acacia species (Muunga). Other tree species include *Branchystegia speciformis* (Msasa) and *Brachystegia Bohemie* (Mupfuti) on shallow soils.

Most arable areas have *Heteropogon Contortus* (spear grass) and *hyperhenia filipendula* (thatch grass) dominantly. Other areas have *aristida* specie and *Loudetia simplex* as the most widespread grasses.

Grass cover in natural Region III and IV is poor to fair where as in the higher rainfall areas it is dense. Vegetation cover in tobacco producing areas is fast depleting and there is need to replace trees through afforestation programs. The district comprises of the savanna type of vegetation with grass of *hyperhenia* specie and trees of *brachystigia bohemie* and *Brachystigia spisiformis* specie (musasa and mutondo) in the greater area of the district.

## 2.2 Land Degradation

Land degradation is very high due to small scale mining for gold and copper which has become prevalent along major rivers such as Mupfure, Mhanyame and Angwa, and in some other places in the district according to 2016 reports. The situation is now increasing at an alarming rate as more unsustainable mining activities by local illegal gold miners and Chinese mining companies join the small scale mining business. These small-scale gold panners use improvised equipment and methods that are damaging to the environment. 90% of the miners in the area are illegal; they are neither registered by Ministry of mines nor any government body. Veld fires also contribute to land degradation.

Deforestation is very high due to the demand of firewood in tobacco curing. Firewood is the cheapest fuel for curing. The areas affected most are listed below:

Table 4: Areas Affected By Land Degradation

Ward	Area Affected	Cause Of Degradation
1	Chipiri-Chitatu, Onapatari	Deforestation through tobacco curing.
2	Mukamba, Chimanmani, Ozana, Northend	Deforestation through tobacco curing.
3	Gudubu, Tateguru,	Illegal gold mining
4	Beri/Urume, Deerhurst,	Illegal gold mining
5	Angwa, Chikuti,	Illegal gold mining
8	Nyamupamire, Nyamatanda, Fiona, Sadoma	Illegal gold mining
9	Angwa, Golden Kopje, Argyle farm	Illegal gold mining, pit sand abstraction
10	Muchichiri	Illegal gold mining
16	Godzi, Runene	Illegal gold mining

## 3. Development Indicators

### 3.1 Education Information

Makonde district has a total number of 116 primary schools and 58 secondary schools district (a total of 174 schools). The district has a total of about 6407 primary students and 1475 teachers, 58 secondary schools and 18718 students with about 663 secondary teachers. In all these education facilities most of them use disused tobacco bans as classrooms and others use open sheds or open space for conducting lessons. A few schools, about 35%, have standard classroom blocks or teacher's accommodation. There are only 5 secondary schools in Chinhoyi urban.

### 3.4 Settlement Types

Makonde district consist of rural and urban settlement. The rural settlement is also comprised of resettlement and communal areas. The urban settlement is Chinhoyi urban with thirteen (13) urban wards. Most of the population is concentrated in the resettlement areas which covers thirteen (13) rural wards which is comprised of A1, A2, old resettlement areas and small-scale commercial farms. Ward 1-13 and 19 are resettlement areas while Ward 14-18 are communal wards. Makonde district has fifty (55) business centres with an average of three (3) business centers per ward hence some people must travel for long distances to access business centers.

Table 8: Settlement By ward

Settlement Type	No of Wards	Specific Wards

Estate Farms	0	Nil

**Figure 2: Map of Livelihood Zones Profiles (Source: department of Survey General)**

## 4. Nutrition

### 4.1 Prevalence Of Malnutrition (District-Level)

Stunting has decreased from 33.8% according to 2010 report to 27, 1% as of 2018 but still remains above the unacceptable threshold. Overweight and obesity has increased from 1.9% to 2.6% as of 2018. Effort should be put to address issues to do with underweight as well as overweight and obesity.

**Table 9: Prevalence Of Malnutrition (District-Level)**

Indicator	2010 Prevalence (%)	2018 Prevalence (%)
Moderate Acute Malnutrition	1.9	3.4
Severe Acute Malnutrition	0.0	0.2
Stunting	33.8	27.1
Overweight and obesity	1.9	2.6

**(Source: National Nutrition survey 2010 & 2018)**

### 4.2 Integrated Management Of Acute Malnutrition

2021 recorded the highest admissions of the past 5 years. Scaling up of the IMAM activities is required urgently in the district.

**Figure 3: IMAM Indicators (Source: DHIS)**

**Figure 4: Integrated Management Of Acute Malnutrition (Source: DHIS 2016 and 2021)**

### 4.3 Feeding Practices In Children Under 2 Years Of Age

There was a marked improvement in the feeding practices in children aged 6-23 months between 2010 and 2018 according to National Nutrition surveys (NNS). Exclusive breastfeeding was at 14.7% in 2010 NNS and 70.6% in 2018 report. A downward trend was, however, noted in ZIMVAC 2021 report in all indicators as illustrated below.

Table 10: Feeding Practices In Children

Feeding Practice	Percentage (%) NNS(2010)	Percentage (%) NNS(2018)	Percentage (%) ZIMVAC(2021)
Minimum Meal Frequency	40.5	42.7	20.0
Minimum Dietary Diversity	14.1	28.1	14.3
Minimum Acceptable Diet	6.5	14.1	5.7
Exclusive Breastfeeding	14.7	70.6	Not available

Source: ZIMVAC (2021) and NNS (2010 & 2018)

### 4.4 Prevalence Of Low Birth Weight

Prevalence of low birth weight is on average 9.0% from 2016 to 2021. Highest prevalence rate of LBW was recorded in 2019 (10.8%) and the least in 2017 (7.1%).

Figure 5: Prevalence Of Low Birth Weight

### 4.5 Maternal Death

Maternal death has been recorded since 2016. The highest was recorded in 2021 which is 285/100 000 live birth.

Figure 6: Maternal Death

## 4.6 Top 5 Causes Of Mortality.

### 4.6.1 Causes Of Mortality

1. Non communicable diseases (NCDs) – Diabetes mellitus and Hypertension
2. Pneumonia
3. Perinatal deaths (death of new borns < 7days)
4. HIV/ AIDS related conditions
5. Malnutrition

## 4.7 Top 10 Disease Conditions

### 4.7.1 Disease/Condition

1. Acute respiratory infections (ARI)
2. Diarrhoeal diseases
3. Skin conditions
4. Injuries
5. Non communicable diseases (NCDs) – Diabetes mellitus and Hypertension
6. Diseases of the eye
7. Malnutrition
8. Malaria
9. Tuberculosis, HIV and AIDS related conditions
10. COVID-19

## 5. Other Development Indicators

### 5.1 Water and Sanitation Information

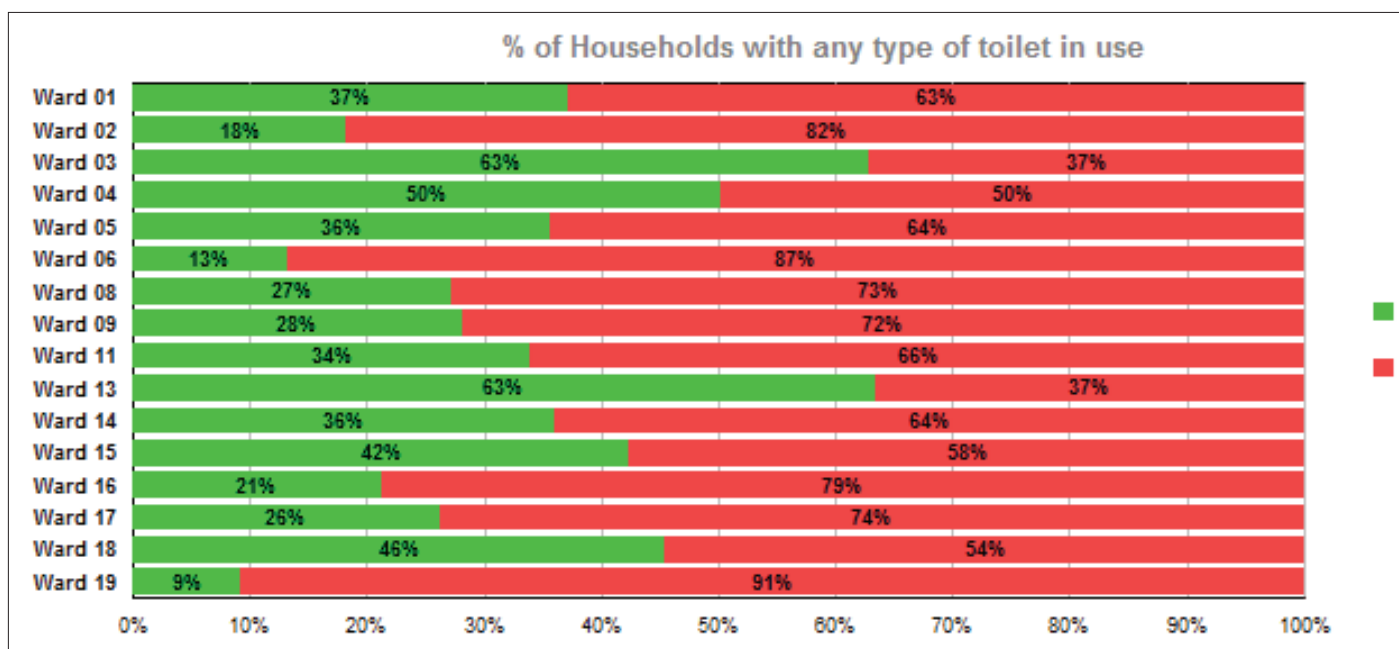

The district has a total of about 673 boreholes, 500 functional and 173 non-functional. In communal Wards 14, 16, 17 and 18 their main sources of water are boreholes. However Nyanga area in Ward 14 does not have clean sources of water due to the very deep-water table, hence they use water from a very small dam which is silted and is used by both people and livestock. In resettlement areas they have protected wells and boreholes, there are also areas in ward Glyen'Amel 6, Hombwe 14 and Zumbara 15 with piped water schemes.

### 5.2 Sanitation Facilities

Access to sanitation facilities remains a challenge in the district with an average of 38% of households owning a latrine in 2016. In 2021 an average of 34% of the households owned latrine facilities which is a decrease compared to 2016. Ward 7 has 100% households owning a latrine and the lowest proportion was reported in Ward 16 at 14.32%. There is need to assist households to own improved latrines.

Table 11: Distribution Of Latrine Facilities By Ward:

Ward	2016 (%) Of Households With Latrine	2021 HH With Latrines	2021 (%) Of Households With Latrine
1	33.26	13	37

## 6. Main Livelihood Sources

The district falls into four (4) economic zones and these are Highveld Prime Cereal and Cash Crop Resettlement, Central Northern Semi Intensive Farming, Cereal and Low Cotton Communal and Highveld Prime Communal.

**Figure 8: Economic Zones Map**

Table 13: Summary of Economic zones.

Economic Zone	Description	Wards
Highveld Prime Cereal and Cash Crop Resettlement	This is a large zone found in various districts across all the Mashonaland Provinces. Prime land and large resettled farms provide surplus production of maize and pulses, and significant cash income from cotton and tobacco production. Better-off households also own sizeable cattle and goat herds. There are several distinct population groups in the zone. Whereas the A1 farmers and commercial farm owners are typically food secure, the (ex-commercial) farm workers are highly mobile and often at risk of food insecurity.	1; 2; 3; 4; 5; 6; 8; 9; 10; 11; 12; 13 and 19
Central Northern Semi Intensive Farming	This zone is spread across the central Middleveld, and extends to the North-Eastern and North-Western lowlands. Maize and small grains are the dominant crops in this agricultural zone, providing both food and cash income. Better-off households are self-sufficient in cereals, and also cultivate groundnuts for cash income. Poor households depend equally on their own crop production, construction wages, gold panning and craft sales.	14, 15, 16 and 17
Cereal and Low Cotton Communal	This relatively productive zone lies to the north of the country covering parts of Gokwe North, Hurungwe, Kariba and Binga districts. Livelihoods are centred on production of maize for household consumption and cotton for cash. For poor households, labour income from picking cotton is very important. Food aid has been consistently provided over the last several years.	18
Highveld Prime Communal	Livelihoods in this prime agricultural zone centre on rain-fed production of cash and food crops. Maize is the predominant food crop but cultivation is diversified and includes groundnuts, paprika, millet, sorghum, round nuts, cow peas, sweet potatoes, soya beans, tobacco and cotton. The zone has relatively high production potential although production is limited due to dense population. Poor road network limits trade.	1; 2; 3; 4; 5; 6; 8; 9; 10; 11; 12

**Source: Zimbabwe HEA Baseline Report, 2012**

The main economic activities in Makonde are farming, gold panning, honey production and horticulture. Farming is normally done between August and May and farmers direct all their financial resources towards crop production. Between February and August farmers sell their produce.

Table 14: Summary Of Livelihood Options

Economic Activities	Description	Wards
Farming Crop Production	Crops; Maize, Soyabeans, Tobacco, Groundnuts, Rapoko, Wheat, Cotton, Cowpeas, Sunhemp, Mbambara nuts, Sorghum, Sunflower, Edible beans and Irish potatoes.	1, 2, 3, 4, 5, 6, 8, 9, 10, 11, 12, 13 and 19
Farming (Livestock production)	Livestock produced Cattle, Goats, Sheep, Indigenous chickens, Layers, Broilers, Turkeys, Ducks, Guinea fowls, Rabbits, Fish, Daily cows, Donkeys.	1, 2, 3, 4, 5, 6, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18 and 19
Gold Panning	Gold panning along river banks and also in the district s state land.	14, 15, 16, 17, 18, 9, 8, 6, 2 and 4
Dairy Farming	Most of the dairy farmers are supported by Nestle Zimbabwe	6, 9, 10, 12 and 13
Horticultural Production	The district has a number Farmers who are into Banana production, macadamia nuts and vegetable production.	6, 7, 9, 10, 12, 4, 13, 14 and 8
Honey Production	Farmers are producing honey and wax for local sales	9, 13 and 14
<b>Source: AARDS</b>		

### 6.1 Wealth Group Profiles

Households are classified into wealthy groups according to their asset base and their sources of livelihood and income. There are four generally agreed wealth groups and these are the better off, middle income, poor and very poor groups. The households' classification vary according to different geographical locations. The general definition for each of the 4 wealth groups is as follows:

**Better Off-:** this group has a broad asset base as they own large pieces of land, some own businesses or are formally employed, they also have reliable remittances and they have big herds of livestock. They can employ people or hire labour. They are able to send their children to school and they also assist the poor households in times of need.

**Middle Class-:** they have assets that depreciate, they own livestock but less than the better off, they have reliable remittances. They have medium sized pieces of land and they are able to hire labour. In times of shock they dispose their assets and some can even move to the lower classes.

**Poor-:** they have limited asset base and do not have reliable remittances. They offer labour to the middle and better off classes. They depend mainly on crop production and are not able to cultivate big pieces of land. They own very few livestock and some do not have draught power for their agricultural activities. They are not able to send all their children to school and they also depend on external assistance.

**Very Poor-:** these are mainly social welfare cases. They are mainly households lead by the elderly, the chronically ill or the disabled. They do not have any assets and they are not able to provide labour. They are neither able to provide for themselves nor to send children to school. They cannot make it in life without external assistance.

## 7. Poverty Levels

Ward 7 has the least poverty at 62.6% (table 8). This is most likely because it is a peri-urban ward and has a number of livelihood options. Wards 1 and 2 have A1 and A2 farms but have farm laborer settlements with a high population of laborers who work on the farms. The laborers are not paid enough and they are not able to meet their needs. Ward 8 is mostly comprised of aged immigrant farm workers.

Table 15: Poverty Prevalence By Ward

Ward No.	Proportion Of Population (%)	2012 Households	Poor Households	Poverty
Ward 01	5	1,704	1,449	85.1%
Ward 02	8	2,746	2,321	84.5%
Ward 03	3	761	594	78.1%

Ward 19	7	2,087	1,776	85.1%
<b>Total</b>	<b>100%</b>	<b>32,597</b>	<b>27,277</b>	<b>82.9%</b>

Source: Zimbabwe Poverty Atlas, 2015

Wards 14 to 18 have poor gravel soils and poor terrain coupled with poor rainfall distribution (figure 2) which could explain the high poverty rates.

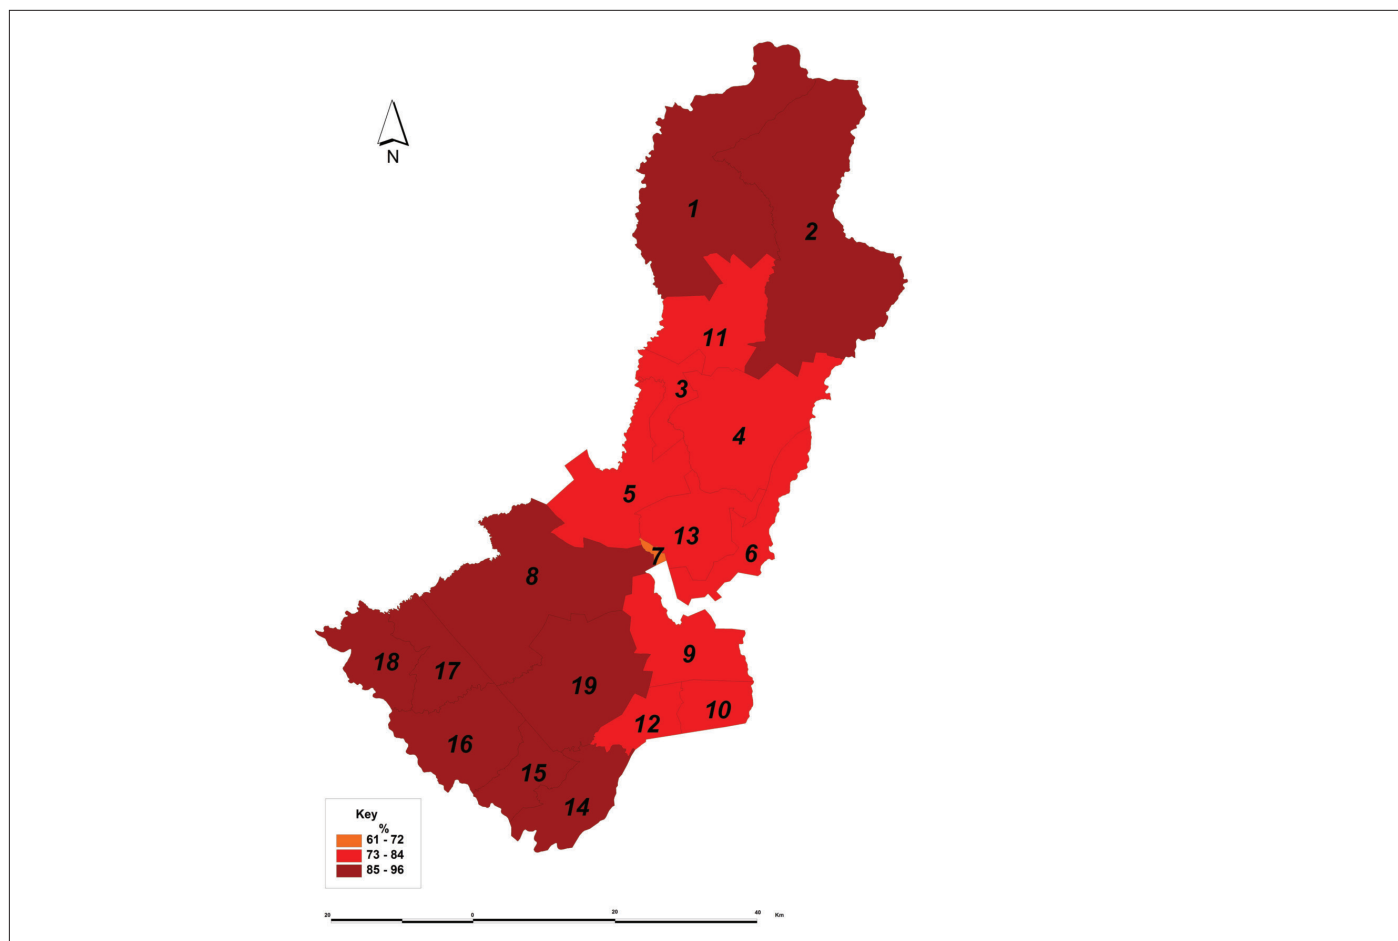

Figure 9: Poverty Map For The District By Ward (Source: Zimbabwe Poverty Atlas, 2015)

## 8. Agriculture information

### 8.1 Natural regions and climate

Makonde district is classified according to agro-ecological regions 2a, 3 and 4. Most of the areas are under agro-ecological region 2a that is ward 1, 2, 3, 4, 6, 11, 13, 5, 8, 19, 12, 10 and 9. All these wards are mainly resettlement areas that specialize on intensive crop and livestock production. Region 3 covers communal Wards 14, 15, part of 16, 17 and Northern tip of the district that is the Doma safari area. Ward 18 part of 17 and part of 16 follow under natural Region 4 semi-intensive farming 450-600m, per year.

Table 16: Summary Of Natural Regions By Ward

Natural Region	Characteristics	Wards
Ila	Natural Region Ila cover about 80% of the district's total area. Rainfall 750-1000mm per annum, intensive farming which include crop and livestock production	1, 2, 11, 3, 4, 13, 5, 6, 7, part of 8 part of 19, 12 and 10
III	Natural Region III cover about 15% of the district's total area. Rainfall 650-800 mm per annum and it not reliable. Semi- intensive farming region mainly livestock production	14, 15, 16, 17 part of 19 and part of 8
IV	Natural Region IV covers about 5% of the district's total area. Semi-intensive farming region 400-650mm per annum unevenly distributed rainfall. livestock production	Ward 18 part of 17 and part of 16

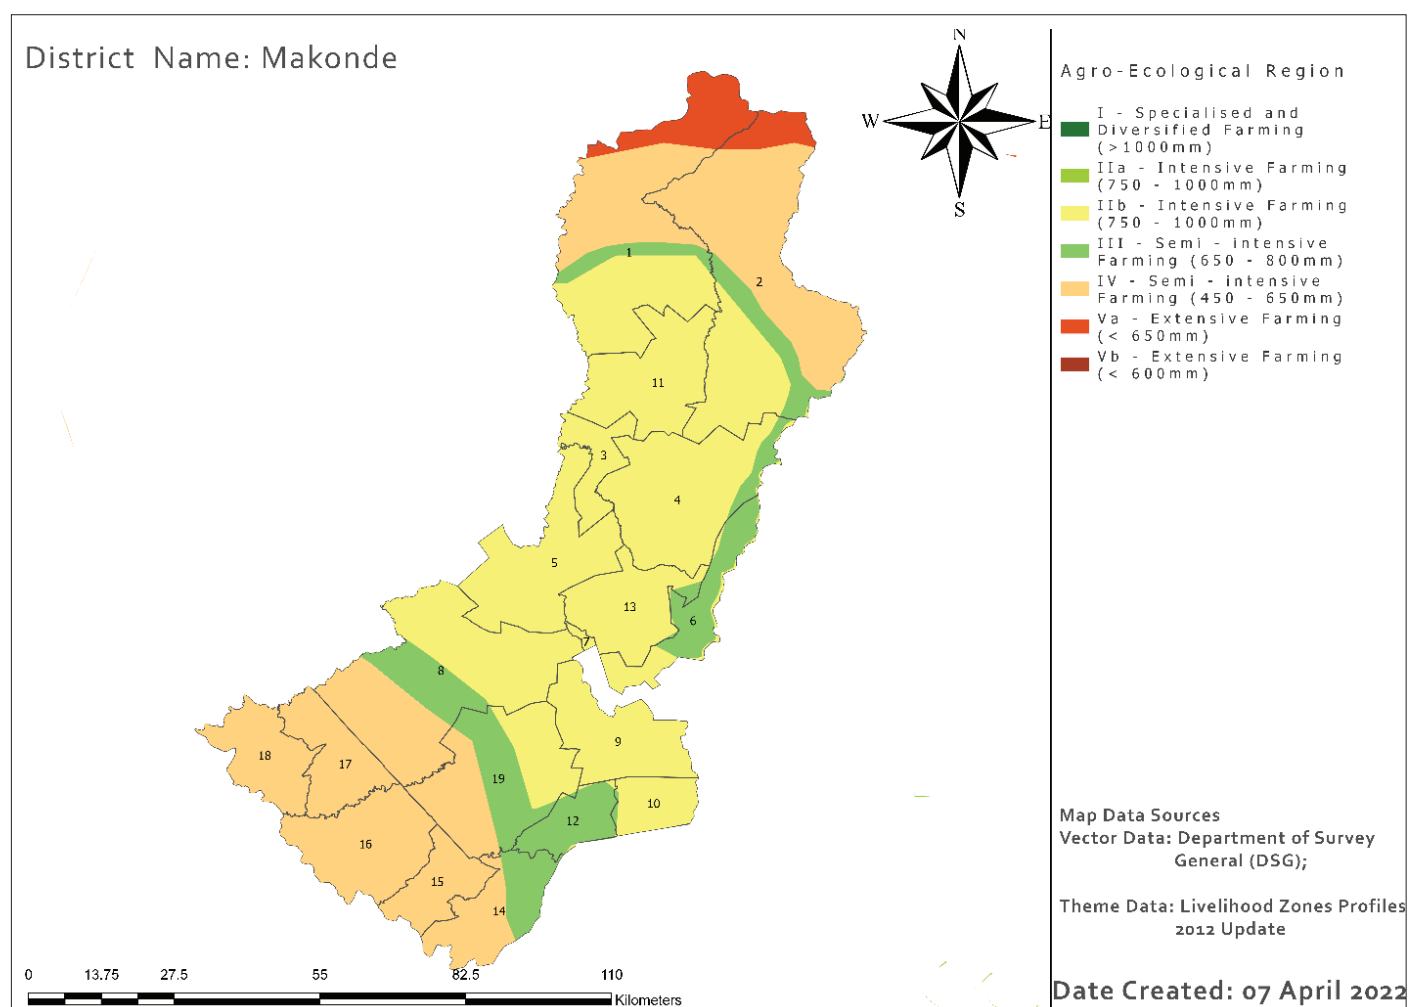

Figure 10: Map Of Natural Regions By Ward (Source: DSG)

### 8.2 Mean Annual Rainfall

The rainfall pattern in Makonde from 2016-2021 ranges from 520mm to 990mm. During the reporting period, 2018/19 received the least rainfall (520mm) while 2016/17 received the highest (990mm). 2016/17 experience cyclone El NINO.

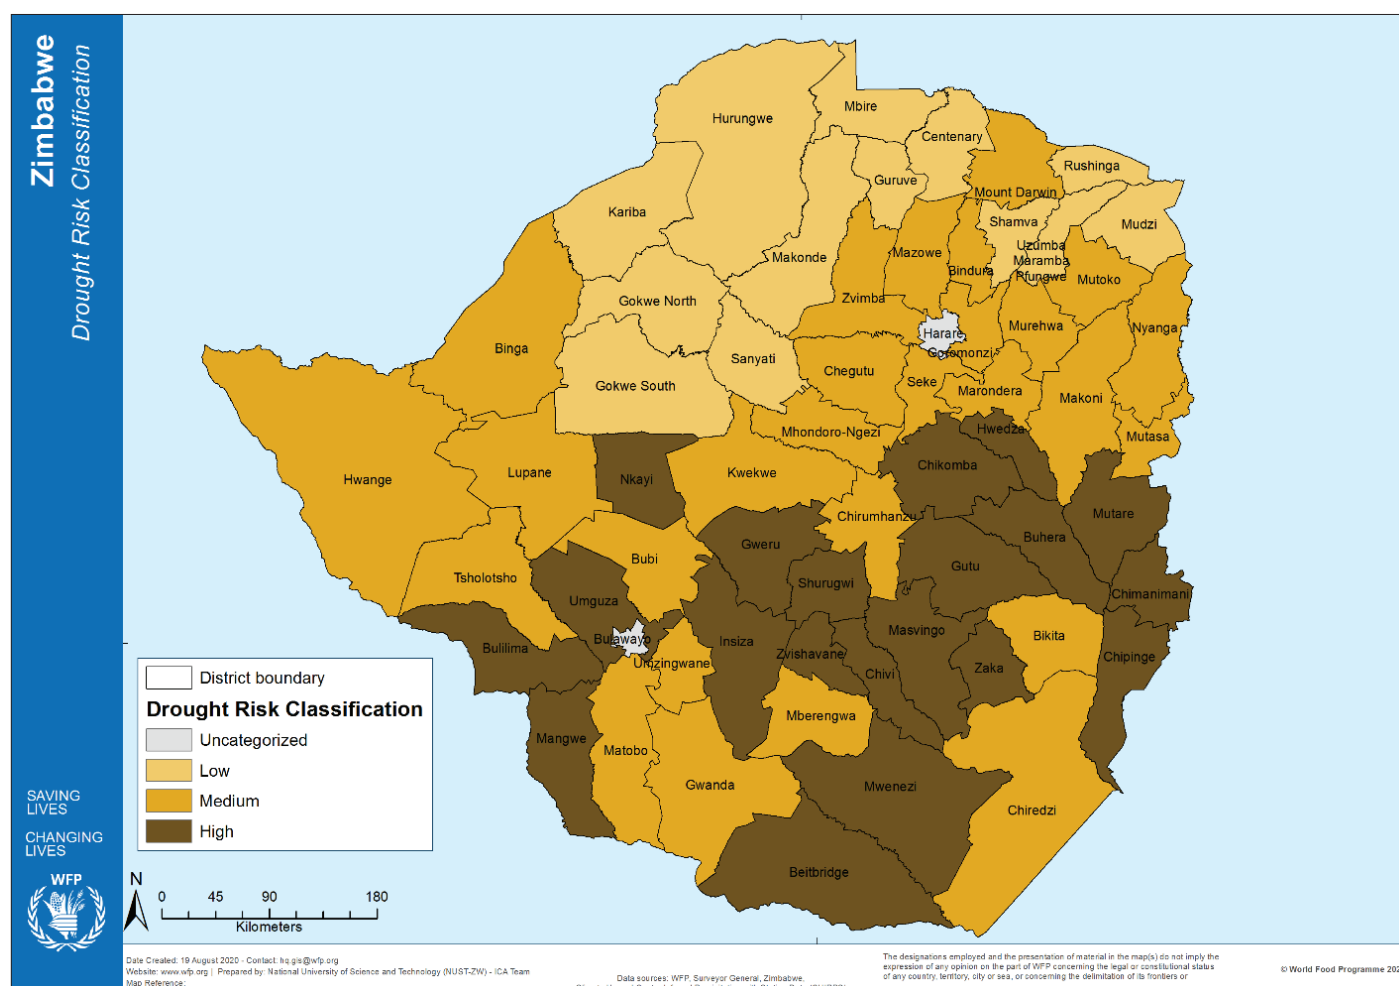

**Figure 11: The Rainfall Pattern In Makonde**

### 8.3 Drought Prone Areas

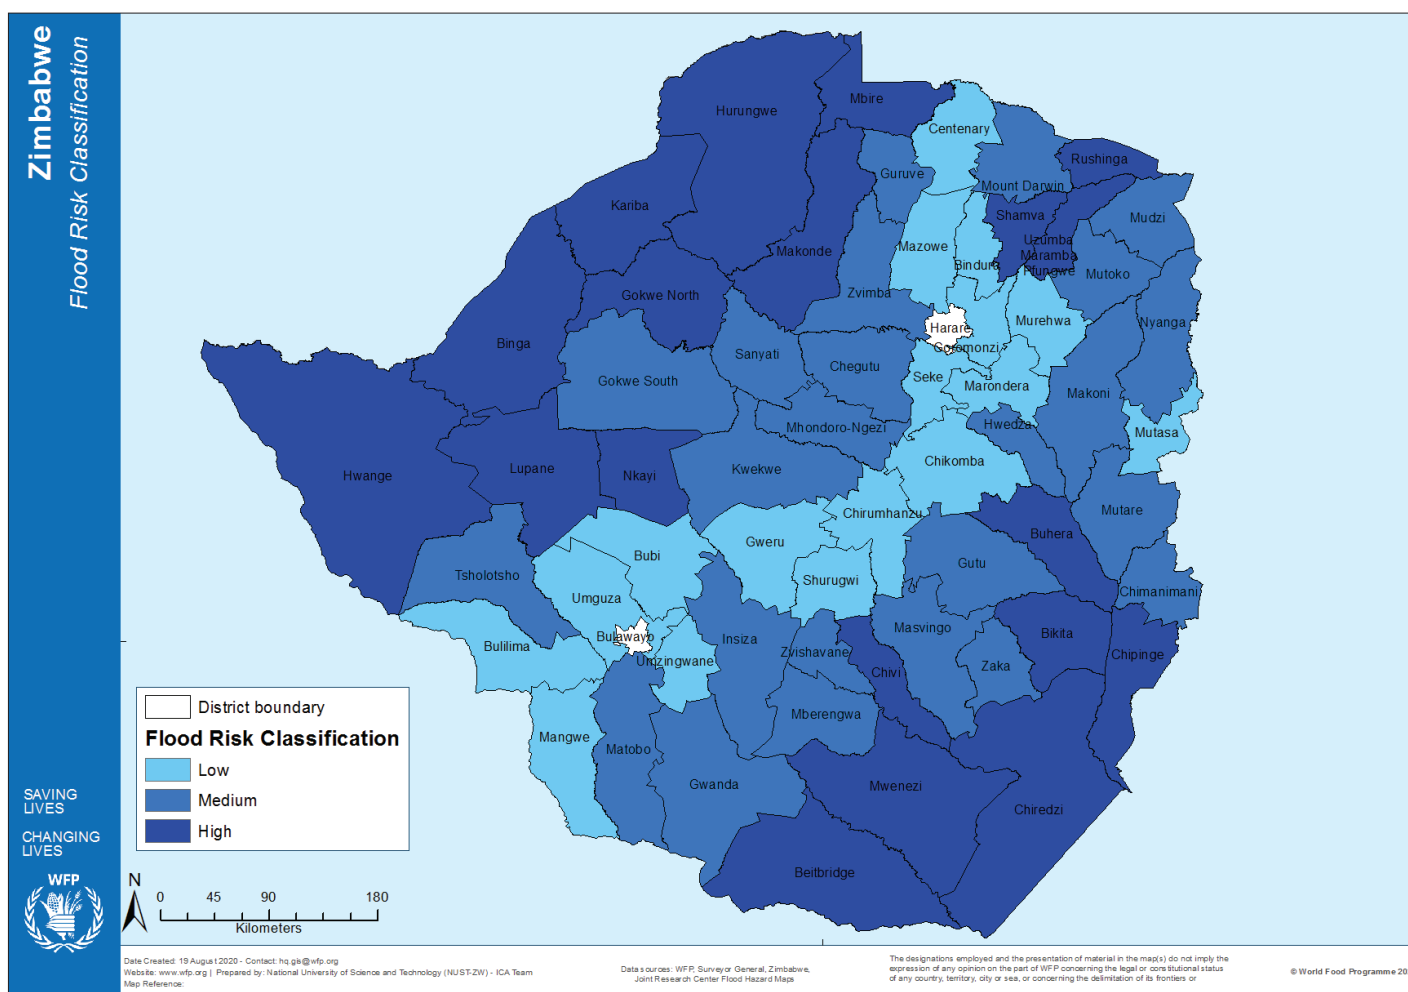

Makonde district has mild and moderate drought-prone areas, of which majority falls into moderate prone area as indicated by the map below. According to drought prone area map, areas in the Agro-ecological region 3 and 4 are considered to be mild drought prone areas while areas in Agro- ecological region 2a and 2b are considered to be moderate drought prone area. However, wards in agro-economic region 4 are more drought prone areas than those in region 2a, 2b and 3.

**Figure 12: Drought Prone Areas (Source: WFP – Zimbabwe National ICA 2021)**

## 8.4 Flood Prone Areas

The district is classified as high flood risk. Severity varies across the wards with wards 5, 8 and 13 being the most affected.

**Figure 13: Flood Prone Areas (Source: WFP – Zimbabwe National ICA 2021)**

## 8.5 Hydro-Geological Conditions

The district has a total of 16 major dams. Most of the dams are situated in the commercial area. The communal area only has one major dam, Shupa. The top three major dams are Biri with a capacity of 78 000 mega litres, followed by Two tree with a capacity of 14 000 mega litres and Reinfield with a capacity of approximately 10 000 Mega litres.

**Table 17: Distribution Of Major Dams By Ward**

Ward	Major Dams In The Ward
5	Reinfield
5	Two tree
9	Biri
2	Rukute
11	Victory

6	East Range
6	Nyakasikana
10	Chitomborwizi, Matoranjera, Nyamasanga
17	Nyamupfurira, Choto

## 9. Crop Production Trends

The main farming sectors in the district are A1 (28%), A2 (19%) and Large scale (19%). Communal areas constitute 17% of the district.

Table 18: Main Farming Sectors In The District

Farming Sector	Area (Ha)	%
A1	242,112	28
A2	165,297	19
Old Resettlement	14,962	2
Communal area	150,426	17
Small scale area	33,522	4
Large scale area	166,263	19
Safari	95,418	11
Total	868,000	100

## 10. Irrigation Schemes

6 of the 10 irrigation schemes in the district are not functional due to lack of maintenance and management. Participants seem unable to organize themselves to service or repair the systems.

Table 19: Distribution Of Irrigation Schemes By Ward

Ward	Name of Irrigation Schemes	Status
1	Binge	Functional
1	Green valley	Functional
3	Chipfundi	Non-functional, transformers were stolen in 2021
3	Elmily Park	Non-functional, boreholes have collapsed
13	Muni	Non-functional, Centre pivot not functional
13	Pulmtree	Functional
6	Nyamugomba	Non-functional, ZESA challenges because of single phase since 2020
6	Armidale	Not functioning, pumping system and electrical motors broken down since 2019.
13	Hillandale	Functional but number of beneficiaries have reduced to disputes.
15	Dombwe	Non-functional since 2018. Equipment was vandalized.

**Source: Irrigation department**

### 10.1 Crop Production Trends

Generally most wards harvest cereal which lasts them at least 12 months. Wards with the least cereal secure months are 17 and 18 whose cereal stocks lasts for about 5 months

Table 20: Cereal Production And Adequacy By Ward

Ward No	Population	Crops Total Production			Total Cerials	Total Grain Requirement	Ward Deficit /Surplus	Period Grain Will Last
		Maize (Mt)	Sorghum (Mt)	Finger Millet (Mt)	Mt	Mt	Mt	Months

## 11. Livestock

### 11.1 Main Types Of Livestock Ownership - Based On Secondary Data From Surveys/Assessments

The main types of livestock reared in the district are cattle, goats, and sheep. Other livestock reared in the district are, layers, broilers, turkeys, ducks, guinea fowls, rabbits, dairy cows and donkeys. The district urban farmers are the main farmers for broilers and layers.

Table 21: Main Types Of Livestock Ownership

Ward	Average Cattle Holding	Average Sheep Holding	Average Goats Holding	Average Turkeys Holding	Average Donkeys Holding	Average Pigs Holding

## 11.2 Main Livestock Diseases

Theileriosis, lamp skin and heart water are the major disease affecting the larger livestock for the past two years. These diseases are prevalent due to poor animal husbandry and high cost of drugs and chemicals.

Table 22: Main Livestock Diseases

Livestock Disease	Wards Mostly Affected(Number and name of wards affected )
Rabies:	All Wards
Newcastle disease:	All wards
Anthrax	5
Foot and Mouth:	4,5
Lumpy skin	All wards
Heart water	All wards
Theileriosis	All wards
<b>Source: AARDSand veterinary services</b>	

## 11.3 Dipping Facilities

The district has a total number of 89 dip tanks and an estimated head of cattle of 91 078. There are also plans to construct new dip tanks in resettlement wards.

Table 8 distribution of dip tanks per ward

Table 23: Distribution Of Dip Tanks Per Ward

Source: AARDS And Veterinary Services

### 12.1 Challenges Faced By Livestock Farmers

- High cost of livestock chemical and drugs
- Cattle theft
- Livestock diseases lime lamp skin, foot and mouth and January disease
- No competitive markets for livestock like cattle's
- Prevalence of hyenas
- Depleted grazing pastures

## 13. Crop Markets

Table 29: Commodity Availability And Prices Per Ward As Of April 2022

### 13.1 Market Challenges

- Most tobacco growers have to travel to Harare or Karoi to sell their products and they face transports challenges,
- Horticulture farmers are failing to register to meet global gap standards to be able to export their products
- The district has been under quarantine for a long time due to foot and mouth disease hence livestock farmers have difficult to market their products
- Poor road networks
- Prices instability due to inflation
- Contracted farmer are being manipulated by their contractors

## 14. Common Hazards

Veld fires, strong winds and army worm are the most chronic hazards that affect the district. Since the district is largely under ecological region II a drought is one period hazard that affect the district

## 14.1 Periodic And Chronic Hazards

Table 30: Periodic And Chronic Hazards

Ward Number And Name	Period Hazards	Chronic Hazards
1, 2, 11, 5, 4, 10 and 12		Veld fires
9, 19, 15, 14 and 13	Hailstorms	Strong winds
5, 8 and 13	Flash floods	
All wards	Army worm	Pest, fall Army worm
14, 15, 17 and 18	Drought	
All wards		Foot and mouth, Llamp skin

## 15. District Development Priorities

Table 31: Makonde District Development Priorities

Development Priority	Wards Targeted in 2016	Wards Targeted in 2022	Achievements/Comments
Building Clinics	1, 2, 5, 8, 11, 12 and 13	1, 2 and 3	From 2016 two clinics were constructed in ward 11 and 13,
Roads Maintenance	All Wards in the district	All wards in the district	Ward 8 main road was rehabilitated, Most roads where damage by cyclone Anna
Schools infrastructure	Whole district	1, 2 and 3	Primary schools in ward 8 and 6 were constructed that is Chidobera and Kapetaromwe were completed. The focus is now on ward 1, 2 and 3
Water and Sanitation	All wards in the district	2, 7 and 14,	all 19 rural wards 1 have solar powered boreholes. The water table in ward 14 is too deep for about 100m and the water is not suitable for human consumption
Repair and maintenance of dams	Dams for wards 11, 14, 12, 5, 3 and 2	3, 4, 5, 11, 14, 15 and 17	New dams are to be constructed in ward 14, 15 and 17. Most of the dams need rehabilitati
Rural Electrification	All wards in the district except for ward 7	All government institutions with special reference to health and school facilities	Efforts for rural electrification were made but during the rainy season electricity power lines are damaged, solar use is now visible in the district .
Vocational Training Centres	New priority	4,13 and 15	Umbowe in ward 13 vocational training centre is now functional with the help of Young Africa and three more centres are on the cards
Livestock disease surveillance and control	New priority	All wards	Increasing of dipping services to reduce and control livestock diseases, limiting of cattle movement, supply of chemicals, encouraging of farmers to have personal dipping services

## 16. Food Security

Food Insecurity Trends (Based on rural ZimVAC district data) – Please refer to previous district Profile data and update.

### 16.1 Food Insecurity Population Cereal Requirements (Mt)

According to Zimvac 2021 report, 70 766 people were estimated to be food insecure during the 2021/2022 season. The highest was recorded at the hunger peak period January- March which is 26 641. A total of 2 619 MT of cereal was required in the district as illustrated below:

Table 32: Food Insecurity Population Cereal Requirements (Mt)

Quarter	Food Insecure Population	Cereal Requirements In Metric Tonnes (Mt)
Jul-Sep (2021)	20 814	770
Oct- Dec (2021)	23 311	863
Jan-Mar (2022)	26 641	986
Total	70 766	2 619
<b>Source: Zimvac (2021)</b>		

### 16.2 Chronic and Transitory Food Insecurity (Based on ICA )

#### Key:

**Category A:** Households in category A would not require any food assistance.

**Category B:** Households in category B could require relief assistance during times of acute stress.

**Category C:** Household in category C and D represent an important niche for recovery activities. Households in category C would particularly benefit from productive recovery activities, such as resilience building risk reduction and disaster preparedness.

**Category D:** Households in category D, on the other hand, are an ideal ground for both protective and productive safety nets i.e. a mix of social protection and livelihood enhancement measures. A period of Conditional Transfers (CTs) in the form of asset building (CFA or FFA) may follow a period of Unconditional Transfers (e.g. GFD or cash transfers) that may be required to stabilize consumption needs for a specific part of the year. To determine this, however, a seasonal analysis of livelihood patterns would be required to establish the best combinations of response options and the support modalities (i.e. CFA, FFA, GFD etc.) required.

### 16.3 Ranking Of Food Insecure Wards Per District

Table 33: Ranking Of Wards By Food Insecurity Levels

Ward	Proportion of population of HH for 2021	Prevalence of Poverty (%)	Average Cereal Adequacy From Own Production	Food Insecurity Rankings
1.	9930	85.1	+12	18
2.	15630	84.5	+12	19
3.	4773	78.1	+12	12
4.	15493	81.6	+12	13
5.	12897	82.5	+12	15
6.	7135	82.3	+12	17
7.	3626	62.6	+12	9
8.	30183	86.6	+12	9
